- Proven effective in live testing
- No overpowering odor
- Cleans a wide variety of hazardous drugs
- No residue left on surfaces after use
- Non-corrosive

What is HDClean™?

Hazardous Drug Clean (HDClean™) is an easy two step wiping procedure that effectively removes hazardous drug surface contamination. HDClean™ has been tested to remove a wide variety of hazardous drugs, hormone agents, controlled substances, and drugs of abuse.

Why use HDClean™?

Our studies show that 80-90% of institutions tested for surface contamination have detectable hazardous drug in at least one area. HDClean™ is an effective method for reducing this contamination and reducing the likelihood of employee exposure to hazardous drugs.

How does HDClean™ work?

Use the tandem packed towelettes, in sequential order, to wipe down surfaces in your pharmacy or administration
